

ABSTRACT OF THE DISCLOSURE

A method of creating an image file to be additionally written is disclosed to prevent logical inconsistency between the image file and existing recorded data in a target information recording medium. The method of creating an image file of target information to be additionally written in an information recording medium includes: a first step of creating image data of the target information; a second step of obtaining identification information of the information recording medium; and a third step of creating an image file having the image data in association with the identification information.
